# CDT & Dental Technician Appreciation Month Spotlight

Some of the most powerful lessons in dental technology don't come from textbooks. They come from the bench, passed down through generations. Saro and Raffi Hatzakortzian, the brothers behind Alien Milling Technologies, share this moving tribute to their father, Hovig Hatzakortzian.

“From the bottom of our hearts, we want to thank the man who made it all possible: our father, Hovig Hatzakortzian. As two brothers building and leading Alien Milling Technologies, we owe everything to the foundation he laid for us. With over 60 years in the dental lab industry, our father didn't just teach us how to work

with our hands, he taught us how to work with heart. He introduced us to this trade from the ground up: from the technical precision of crafting restorations to the discipline of managing a business with integrity. There was no shortcut in his book, no compromise in quality. Every case on his bench was treated like it was for a loved one. That philosophy became the heartbeat of Alien Milling.

‘Each case deserves attention to detail, and each case must be the best it can be.’ Those words didn't just guide us. They defined us. Even today, his passion for the dental lab industry is as strong as ever. His drive, his standards, and his pride in the work continue to inspire us and our team every single day. Dad, thank you for passing down a legacy of excellence. Your hands built more than crowns. They built a future for us, and for Alien Milling. We love you, and we're proud to continue what you started.

This Father's Day, throughout CDT & Dental Technician Appreciation Month, and always, we celebrate the mentors and visionaries whose impact continues through the hands and hearts of the next generation.”

—Saro and Raffi Hatzakortzian
